## Fact sheet L14-FB

## Stranded fields - Q4 2009

Location map of the L14-FB (=L14-6) gas field

## General information

The L14-FB gas field was discovered in 1991 by NAM by well L14-06. It is situated in the L14 block, straddling the boundaries of the L13 production license (NAM). The field is located on the Noord-Holland platform. The gas is trapped in the sandstones of the Upper Slochteren Member (ROSLU), beneath the clay of the Ten Boer Member (ROCLT). Complete results of RFT's are available on the composite well log.

The sandstones of the Slochteren Formation (ROSL) comprise mainly aeolian sediments and fluvial sediments. The field has not been developed and mainly lies in open area, with a minor part in NAM acreage.

## Sequence of events

| Date | Event |
| :---: | :--- |
| $15-10-1970$ | Exploration license L14 granted (Placid) |
| $26-10-1977$ | Production license L13 effective (NAM) |
| $19-11-1990$ | Production license L14 effective (Placid) |
| $11-11-1990$ | Spud date L14-06 (NAM) |
| $20-12-1990$ | TD reached 3376 m ah |
| $27-12-1990$ | RFT's in ROSLU and ROSLL (3089,0 - 3317,0) |
| $11 / 12-01-1991$ | Production test ROSLU (3125,0 - 3080,0 m ah). |
| $19-01-1991$ | Well L14-06 completed and suspended. |
| $18-12-1998$ | Production License L14 splitted to L14a (TransCanada) |
| 2001 | Partial relinquishment L14a (GDF) |
| $22-12-2005$ | Relinquishment L14a (GDF) |

More RFT and production test information is available on the well log

## Well status

L14-06: Closed-in

## Infrastructure

The nearest platform is: L13-FD-1 of NAM, about ten kilometers to the northwest. The nearest pipeline (shortest distance rectangular to the pipeline) is located approximately eight kilometers to the west.
